

2015 ANNUAL WATER QUALITY REPORT

The following information, regarding your drinking water, is provided to you by the Jasper Water Utility. The information includes details about the quality of the water you drink and some of the health related factors we monitor on your behalf. During 2015, your water met EPA and state drinking water health standards.

Water Source and Treatment

The Jasper Water Utility water supply is drawn from the Patoka River

All water is chemically treated with Brennfloc 2818 and lime to aid in settling out particulate matter and then filtered. Chlorine and UV are used to kill harmful bacteria. Fluoride is added to aid in dental health. Potassium permanganate and activated carbon are added in the treatment process to aid in improving taste.

Water Quality Protection and Testing

In compliance with State and Federal requirements all water is tested regularly to assure the quality for all consumers. The data included herein is a summary to provide you full information on the water you use.

Testing is done for the clarity of the water, known as "turbidity," potential contaminants in the Patoka River water brought in for treatment, and for compounds which could be created in treatment. Testing also is done in the distribution system and selected homes to assure that chlorine levels are kept up and that lead and copper levels are kept low for the consumer.

In August of 2015 to further assure safe drinking water we added a UV system to aid with the chlorination process to kill bacteria. However, if some organics are present the chlorine can create new compounds known as trihalomethanes (TTHM's). To date treatment has been able to minimize the creation of TTHM'S as much as possible and there are no long term problems with TTHM's in your Jasper water.

Additional Health Information

The U. S. Environmental Protection Agency (E. P. A.) is charged with the responsibility of setting limits for contaminants in drinking water. The Indiana Department of Environmental Management, acting on behalf of the U. S. E. P. A., oversee's all public water supplies in the State of Indiana. Additional information about contaminants and potential health effects can be obtained from the Environmental Protection Agency's Safe Drinking Water Hot Line at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV / Aids or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their healthcare providers. EPA / CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Cryptosporidium is defined as a protozoan parasite commonly found in surface waters. It can cause gastrointestinal problems including acute diarrhea, abdominal pain, vomiting, and fever. Healthy individuals are in minimal danger from these protozoa; however, it can be life threatening to people infected with HIV or AIDS. There currently is no standard set for these protozoa. The new treatment facilities include deep filtration to assure that problems with these protozoa are prevented. Improvements in the future may be implemented to help facilitate the treatment even further.

Lead and copper can be a concern, especially in older homes where either lead pipes or copper pipes with lead solder may be a source. Since lime is one of the chemicals used for treatment, most plumbing is coated with a protective layer of lime. This will prevent either lead or copper from going into the water. Testing has not shown this to be a problem in the Jasper system.

Jasper Water Utility

The Jasper Water Utility is managed by the Jasper Utility Service Board which meets at 7:00 P. M. on the third Monday of each month at City Hall. Additional information may be obtained by calling Mr. Ernie Hinkle, Water Manager at 812-482-5252
